No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (27 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1987 articles are as shown on the article title pages; if no fee code appears on the title page, the copy fee is the same as for current articles.

CONTENTS OF VOLUME 165

NUMBER 1, AUGUST 15, 1987

Review. Evaluation of Sulfate Esters and Glucuronides by Enzymatic Means
A. B. Roy 1

Review. Kinetic Implications in the Analytical Use of Enzymes *A. B. Roy* 13

Isolation of RNA for Dot Hybridization by Heparin–DNase I Treatment of Whole Cell Lysate *Zdzislaw Krawczyk and Carl Wu* 20

Enzymatic Assay of Hemoglobin in Tissue Homogenates with Chlorpromazine
Kayoko Nakamura, Hideko Maeda, and Hajime Kawaguchi 28

Silver Staining of Native and Denatured Eucaryotic DNA in Agarose Gels
Miroslav Gottlieb and Mikuláš Chavko 33

The Separation of D/L Amino Acid Pairs by High-Performance Liquid Chromatography after Precolumn Derivatization with Optically Active Naphthylethyl Isocyanate *David S. Dunlop and Amos Neidle* 38

Use of Cyanuric Chloride-Activated Paper for Detection of Subpicogram Quantities of Specific DNA Sequences and Its Application to Linked Restriction Fragment Length Polymorphism Analysis in a Duchenne Muscular Dystrophy Affected Family
H.-D. Hunger, A. Speer, Chr. Flachmeier, R. Hanke, G. Behrendt, and Ch. Coutelle 45

Automatic Nitrous Oxide Synchronization of Mitotic Human Cell Cultures
C. S. Downes, D. M. Unwin, R. G. W. Northfield, and M. J. Berry 56

The State of the N-Terminus of Recombinant Proteins: Determination of N-Terminal Methionine (Formylated, Acetylated, or Free)
Keith Rose, Luc-Alain Savoy, Marco G. Simona, Robin E. Offord, Paul T. Wingfield, Robert J. Mattaliano, and David R. Thatcher 59

The Isolation of High-Molecular-Weight DNA from Plants
J. Hattori, S. G. Gottlob-McHugh, and D. A. Johnson 70

The Analysis of Enzyme Progress Curves by Numerical Differentiation, Including Competitive Product Inhibition and Enzyme Reactivation
Steven C. Koerber and Anthony L. Fink 75

Improved Synthesis and Iodination of a Cleavable Photoactivated Probe
Helen R. Murphy and H. William Harris, Jr. 88

Chromophoric and Fluorophoric Peptide Substrates Cleaved through the Dipeptidyl Carboxypeptidase Activity of Cathepsin B
Jan Pohl, Silvia Davinic, Ivo Bláha, Petr Štrop, and Vladimír Kostka 96

A Highly Sensitive High-Performance Liquid Chromatography Method for the Estimation of Ascorbic and Dehydroascorbic Acid in Tissues, Biological Fluids, and Foods *Willy A. Behrens and René Madère* 102

A Fluorescent Ligand for Binding Studies with Glycopeptide Antibiotics of the Vancomycin Class *Paul H. Popieniek and R. F. Pratt* 108

Synthesis, Isolation, and Characterization of Conjugates of Ovalbumin with Monomethoxypolyethylene Glycol Using Cyanuric Chloride as the Coupling Agent
Chung-Ja C. Jackson, James L. Charlton, Kimberly Kuzminski, Glen M. Lang, and Alec H. Sehon 114

Determination of Cyclic Nucleotide Phosphodiesterase Activity by High-Performance Liquid Chromatography *Arja Alajoutsijärvi and Erkki Nissinen* 128
Assay of Tryptophan Decarboxylase from *Catharanthus roseus* Plant Cell Cultures by High-Performance Liquid Chromatography *Ed J. M. Pennings, Ingrid Hegger, Robert van der Heijden, Johannis A. Duine, and Robert Verpoorte* 133
Determination of Plasmid Copy Number by the "Boiling" Method *Ivan G. Ivanov and Dimcho R. Bachvarov* 137
A Spectrophotometric Rate Assay of Aminoacylase *Hong-Yon Cho, Katsuyuki Tanizawa, Hidehiko Tanaka, and Kenji Soda* 142
Quantitative Surface Studies of Protein Adsorption by Infrared Spectroscopy. II. Quantification of Adsorbed and Bulk Proteins *David J. Fink, Tim B. Hutson, Krishnan K. Chittur, and R. Michael Gendreau* 147
Effect of "Stacking" on the Resolving Power of Ultrathin-Layer Two-Dimensional Gel Electrophoresis *Tibor Gyenes and Elisabeth Gyenes* 155
The Microfibrillar Proteins of Human Hair: Separation by High-Performance Liquid Chromatography and Isolation of Some Proteins Enriched in Glycine and Tyrosine *Hayel M. Said, Alan J. Feige, A. E. Newsom, Scott L. Lauren, and Roger A. Mathews* 161
Synthesis of 5-*S*-L-Cysteinyl-glycine–L-Dopa, a Natural Substrate for Serum and Melanocyte Dipeptidase *Bertil Kågedal, Anne-Louise Gawelin, and Anita Pettersson* 167
Fast Atom Bombardment Combined with Tandem Mass Spectrometry for Determining Structures of Small Oligonucleotides *Ronald L. Cerny, Kenneth B. Tomer, Michael L. Gross, and Lutz Grotjahn* 175
A Quantitative Immunobinding Assay for Vitamin D-Dependent Calcium-Binding Protein (Calbindin-D_{28k}) Using Nitrocellulose Filters *Samuel Varghese and Sylvia Christakos* 183
Detection of Transiently Phosphorylated Membrane Proteins by Protein Blotting through a Nonionic Detergent Layer *Shintaro Iwashita, Koreaki Ito, and Mitsuaki Yoshida* 190
Computer Prediction of Potential Immunogenic Determinants from Protein Amino Acid Sequence *Viktor Krchňák, Otakar Mach, and Antonín Malý* 200
A Microtechnique for Dialysis of Small Volume Solutions with Quantitative Recoveries *Christopher M. Overall* 208
The Deoxyribose Method: A Simple "Test-Tube" Assay for Determination of Rate Constants for Reactions of Hydroxyl Radicals *Barry Halliwell, John M. C. Gutteridge, and Okezie I. Aruoma* 215
Detection of Prostaglandins by High-Performance Liquid Chromatography after Conversion to *p*-(9-Anthroyloxy)phenacyl Esters *Hassan Salari, Moira Yeung, Scott Douglas, and Walter Morozowich* 220
2,3-Diaminophenazine Is the Product from the Horseradish Peroxidase-Catalyzed Oxidation of *o*-Phenylenediamine *Peter J. Tarcha, Victor P. Chu, and Dave Whittern* 230

NUMBER 2, SEPTEMBER 1987

Review. Dye-Ligands and Multifunctional Adsorbents: An Empirical Approach to Affinity Chromatography *Robert K. Scopes* 235

Additives for Immobilized pH Gradient Two-Dimensional Separation of Particulate Material: Comparison between Commercial and New Synthetic Detergents
Elisabetta Gianazza, Thierry Rabilloud, Laura Quaglia, Paolo Caccia, Silvia Astrua-Testori, Licia Osio, Giordana Grazioli, and Pier Giorgio Righetti 247

A Simple Device for Automated Spectrophotometric Kinetics Using a Diode Array Spectrophotometer *Robert K. Scopes and Barton Holmquist* 258

Acid α-Naphthyl Acetate Esterase Assay in Murine Lymphocytes
Janusz Frąckowiak and Andrzej Szutowicz 269

Radioenzymatic Determination of Phenylpropanolamine in Plasma
Audrey A. Reid, Patrick J. Fleming, and C. Raymond Lake 275

A Novel Method for the Detection of Receptors and Membrane Proteins by Scintillation Proximity Radioassay *Nathan Nelson* 287

Parameters Affecting the Yield of DNA from Human Blood
Sarah Gustafson, Jacqueline A. Proper, E. J. Walter Bowie, and Steve S. Sommer 294

Determination of Substituted Indole Derivatives by Ion Suppression–Reverse-Phase High-Performance Liquid Chromatography
W. T. Frankenberger, Jr., and M. Poth 300

Normalization of Multiple RNA Samples Using an *in Vitro*-Synthesized External Standard cRNA *Antonio Toscani, Dianne Robert Soprano, Stephen C. Cosenza, Thomas A. Owen, and Kenneth J. Soprano* 309

Lectin–Enzyme Immunoassay of Transferrin Sialovariants Using Immobilized Antitransferrin and Enzyme-Labeled Galactose-Binding Lectin from *Ricinus communis* *J. M. Pekelharing, P. Vissers, H. A. Peters, and B. Leijnse* 320

An Apparatus for Continuous Analysis of Protease-Catalyzed Acyl Transfer Reactions
Volker Schellenberger, Ute Schellenberger, Yuri V. Mitin, and Hans-Dieter Jakubke 327

High-Performance Liquid Chromatographic Procedure for Quantitative Determination of Pentylenetetrazol in Serum and Discrete Areas of Rat Brain
R. Soto-Otero, E. Mendez-Alvarez, G. Sierra-Paredes, J. Galan-Valiente, E. Aguilar-Veiga, and G. Sierra-Marcuño 331

Assay of Reducing Sugars in the Nanomole Range with 2,2′-Bicinchoninate
Sabine Waffenschmidt and Lothar Jaenicke 337

A Flow Microcalorimetric Method for Enzyme Activity Measurements: Application to Dihydrofolate Reductase
Lucas Sica, Robert Gilli, Claudette Briand, and Jean Claude Sari 341

Preparation of Neoglycoprotein–Enzyme Conjugate Using a Heterobifunctional Reagent and Its Use in Solid-Phase Assays and Histochemistry
Hans-J. Gabius, Reinhild Engelhardt, Klaus P. Hellmann, Thea Hellmann, and Agnes Ochsenfahrt 349

Ketimine Rings: Useful Detectors of Enzymatic Activities in Solution and on Polyacrylamide Gel. Detection of L-Amino Acid Oxidase, Glutamine Transaminase, Pantetheinase, and Acylase I
G. Ricci, A. M. Caccuri, M. Lo Bello, S. P. Solinas, and M. Nardini 356

Preparation and Storage of Isotopically Labeled Reduced Nicotinamide Adenine Dinucleotide *Dexter B. Northrop and Ronald G. Duggleby* 362

Affinity Purification of Human Brain Tissue Factor Utilizing Factor VII Bound to Immobilized Anti-factor VII *L. Vijaya Mohan Rao and Samuel I. Rapaport* 365

Chemiluminescence Detection of H_2O_2 Produced by Human Neutrophils during the Respiratory Burst *Matthias P. Wymann, Vinzenz von Tscharner, David A. Deranleau, and Marco Baggiolini* 371

Alkaline Extraction and Reverse-Phase High-Performance Liquid Chromatography of Adenine and Pyridine Nucleotides in Human Platelets *Giuliana Leoncini, Enrica Buzzi, Mitzi Maresca, Mauro Mazzei, and Alessandro Balbi* 379

Image Processing and Pattern Recognition Algorithms for Evaluation of Crossed Immunoelectrophoretic Patterns (Crossed Radioimmunoelectrophoresis Analysis Manager; CREAM) *Ib Søndergaard, Lars Kærgaard Poulsen, Martin Hagerup, and Knut Conradsen* 384

Detection of Polyols and Sugars by Cuprammonium Ion in the Presence of Strong Base *D. B. McKay, G. P. Tanner, D. J. Maclean, and K. J. Scott* 392

A General Method for the Purification of Synthetic Oligodeoxyribonucleotides Containing Strong Secondary Structure by Reversed-Phase High-Performance Liquid Chromatography on PRP-1 Resin *Markus W. Germann, Richard T. Pon, and Johan H. van de Sande* 399

Use of Mild Detergent Gel Electrophoresis for Isolation and Characterization of the Kidney Brush Border D-Glucose Transporter *Mireille Starita-Geribaldi, Jean-Claude Poiree, and Pierre Sudaka* 406

A Nonenzymatic Method for Determination of Hydrogen Peroxide and Organic Peroxides *Robert Ebermann and Armin Couperus* 414

Evidence for Isoaspartyl (Deamidated) Forms of Mouse Epidermal Growth Factor *Richard P. DiAugustine, Bradford W. Gibson, William Aberth, Mary Kelly, Carol M. Ferrua, Yasuhiro Tomooka, Charles F. Brown, and Michael Walker* 420

Ion-Enhanced Fluorescence Staining of Sodium Dodecyl Sulfate–Polyacrylamide Gels Using Bis(8-*p*-toluidino-1-naphthalenesulfonate) *Paul M. Horowitz and Steven Bowman* 430

Chondroitin Sulfate-Derivatized Agarose Beads: A New System for Studying Cation Binding to Glycosaminoglycans *Graeme K. Hunter* 435

High-Performance Liquid Chromatographic Analysis of Oligodeoxyribonucleotide Base Composition *J. Scott Eadie, Lincoln J. McBride, J. William Efcavitch, Louis B. Hoff, and Richard Cathcart* 442

Detection by ^{125}I-Cationized Cytochrome *c* of Proteoglycans and Glycosaminoglycans Immobilized on Unmodified and on Positively Charged Nylon 66 *Ralph Heimer, Lawrence Molinaro, Jr., and Phyllis M. Sampson* 448

Formation of Yellow, Orange, and Red Pigments in the Reaction of Alk-2-enals with 2-Thiobarbituric Acid *Hiroko Kosugi, Tetsuta Kato, and Kiyomi Kikugawa* 456

Diplococcal β-Galactosidase with a Specificity Reacting to β1–4 Linkage but Not to β1–3 Linkage as a Useful Exoglycosidase for the Structural Elucidation of Glycolipids *Kyoko Kojima, Masao Iwamori, Sei-ichi Takasaki, Kaneyuki Kubushiro, Shirou Nozawa, Rihachi Iizuka, and Yoshitaka Nagai* 465

AUTHOR INDEX FOR VOLUME 165 475

The Subject Index for Volume 165 will appear in the December 1987 issue as part of a cumulative index for the year 1987.

INFORMATION FOR AUTHORS

Analytical Biochemistry is an international journal that publishes original articles on methods and methodology of interest to the biological sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell biology and cell, tissue, and organ culture methods that are of general application.

— Membranes and membrane proteins. These methods form a major section of interest.

— Procedures of interest in the field of molecular genetics including those necessary for cloning, sequencing, and synthesis of nucleic acids and for mutagenesis.

— Purification of enzymes and other proteins, but only if the methods are both novel and applicable generally, i.e., the interest is in a means of purification rather than in the protein that is being purified.

— Immunological techniques both analytical and preparative, if they are of general applicability by biochemists. Immunoassays are included but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that offer a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited outlines or manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to *Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101. In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

An extended Information for Authors is published in each July issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC-IUB rules and recommendations, and accepted abbreviations.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about $8\frac{1}{2} \times 11$ inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 55 letters and spaces), an abstract (250 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel, rapid, improved, simple, sensitive, efficient, convenient, new.* Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? Abbreviations should not be used in the article title or running title.

Please number all pages of the manuscript.

Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers. (Please see the Appendix at the end of the extended Instructions to Authors published in the July 1, 1986 issue for a list of recommended key words.) These words will also be used in the preparation of the annual cumulative subject index for the journal.

Text. The suggested organization of an article is: abstract; introductory statement; Materials and Methods; Results; Discussion; Acknowledgments; References. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Instructions for Authors, appearing in the July issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be

described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for photoreproduction. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21×27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum. All photographs should be submitted as single glossy prints with strong contrasts and not mounted on cardboard; the magnification should be indicated by a scale where possible. **Simple histograms should be avoided. A table or a paragraph in the text is preferred.**

Illustrations in color can be accepted only if the authors defray the cost.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

Authors may wish to submit complex tables as camera-ready copy. In this way, they are spared tedious proofreading and the chance of error is reduced. Tables submitted as camera-ready copy should be typed single-spaced whenever possible, and preferably submitted as 5×7-in. glossy prints.

Footnotes should be designated in text by superscript numbers and typed on a separate sheet. Footnotes to tables should be identified with lowercase italic superscript letters and placed at the bottom of the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service Source Index,* 1985. Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jackson, G. E. D., and Young, N. M. (1987) *Anal. Biochem.* **162,** 251–256.
2. Bovey, F. A., and Jelinski, L. W. (1983) Chain Structure and Conformation of Macromolecules, p. 150, Academic Press, New York.
3. Britton, G. (1985) *in* Methods in Enzymology (Law, J. H., and Rilling, H. C., Eds.), Vol. 111, pp. 113–149, Academic Press, Orlando, FL.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
